

## **FMB-Süd 2019**

20 and 21 February 2019 | Augsburg Exhibition Centre (Messe Augsburg)

**PRESS INFORMATION**

**FMB-Süd 2019\_06**

Bad Salzuflen, 2/4/2019

[Focal issue: Predictive Maintenance](#)

## **FMB-Süd 2019 with an extended focus**

**The doors to the third FMB-Süd event will be opening on 20 February 2019. At the beginning of the year's programme of trade fairs, decision-makers in the field of mechanical engineering and industry are provided with the opportunity here to find out about current trends. This year the trade show organiser will also be focusing on the topic of predictive maintenance.**

The exhibiting companies will be showcasing the entire spectrum of the supply industry for mechanical engineering and industry. Find out about the latest products and trends – from metalworking and plastics processing to assembly, handling and automation technology as well as drive engineering through to control technology. Enterprises offering production-related services will be presenting product developments, ideas and solutions in the area of logistics as well as repair and maintenance.

This year, the accompanying programme of lectures will lend the FMB-Süd an additional appeal, which will be focusing on current issues in industry – for instance in predictive maintenance. It is regarded as a key measure in order to reduce maintenance costs and, at the same time, to keep the productivity of the machine park at a high level. And it is the first field of action in many enterprises for digitalisation in terms of Industry 4.0. For example, drive components and sensors collect data which gives an indication of the residual life cycle of expendable parts.

This topic will be the focal point of the programme of lectures on 21 February, the second day of the fair. For instance, M.Sc. Jonas Dumler of the Chair of Environmentally-compatible Production Engineering of Bayreuth University will be speaking on “Decentralised Data Analysis for Predictive Maintenance Scenarios”, and a panel discussion with six specialists will be providing an overview of the use of artificial intelligence in predictive maintenance.

Apart from the extended focal issues, the concept of the FMB-Süd will be retained in its third year: Free admission, free visitor parking right outside the hall, and the show is entirely geared towards enabling exhibitors and visitors to engage in conversation with each other without any great effort and to establish new contacts.
